

AMENDATORY SECTION (Amending WSR 03-20-115, filed 10/1/03, effective 1/1/04)

WAC 296-841-100 Scope.

((~~IMPORTANT:~~))

This chapter applies **only** if your employees:

✓ Are exposed to a respiratory hazard

OR

✓ Could be exposed to one of the specific hazards listed below.

This chapter applies to any workplace with potential or actual employee exposure to respiratory hazards. It requires you to protect employees from respiratory hazards by applying this protection strategy:

✓ Evaluate employee exposures to determine if controls are needed

✓ Use feasible controls. For example, enclose or confine the operation, use ventilation systems, or substitute with less toxic material

✓ Use respirators if controls are not feasible or if they cannot completely ((control)) remove the hazard.

Definition:

Exposed or exposure:

The contact an employee has with a toxic substance, harmful physical agent or oxygen deficient condition, whether or not protection is provided by respirators or other personal protective equipment (PPE). Exposure can occur through various routes of entry, such as inhalation, ingestion, skin contact, or skin absorption.

Note: ✓ Examples of substances that may be respiratory hazards when airborne include:

((x)) - Chemicals listed in Table 3

((x)) - Any substance

((-)) ✓ Listed in the latest edition of the NIOSH Registry of Toxic Effects of Chemical Substances

((-)) ✓ For which positive evidence of an acute or chronic health hazard exists through tests conducted by, or known to, the employer

((-)) ✓ That may pose a hazard to human health as stated on a material safety data sheet kept by, or known to, the employer

((x)) - Atmospheres considered oxygen deficient

((x)) - Biological agents such as harmful bacteria, viruses or fungi

- Examples include airborne TB aerosols and anthrax

✓ Pesticides with a label requirement for respirator((s)) use

✓ Chemicals used as crowd control agents such as pepper spray

✓ Chemicals present at clandestine drug labs.

✓ These substances can be airborne as dusts, fibers, fogs, fumes, mists, gases, smoke, sprays, vapors, or aerosols.

Reference: ✓ Substances in Table 3 that are marked with an X in the "skin" column may require personal protective equipment (PPE). See WAC 296-800-160, Personal protective equipment, for additional information and requirements.

✓ If any of the following hazards are present in your workplace, you will need both this chapter and any of the following specific rules that apply:

Hazard	Rule that applies
--------	-------------------

Acrylonitrile	WAC 296-62-07336
Arsenic (inorganic)	WAC 296-62-07347
Asbestos	WAC 296-62-077
Benzene	WAC 296-62-07523
Butadiene	WAC 296-62-07460
Cadmium	WAC 296-62-074 through 296-62-07449 <u>or 296-155-174</u>
Carcinogens	Chapter 296-62 WAC, Part F
Coke ovens	Chapter 296-62 WAC, Part O
Cotton dust	Chapter 296-62 WAC, Part N
1, 2-Dibromo-3-chloropropane	WAC 296-62-07342
Ethylene oxide	WAC 296-62-07355
Formaldehyde	WAC 296-62-07540
Lead	WAC 296-62-07521 <u>or 296-155-176</u>
Methylene chloride	WAC 296-62-07470
Methylenedianiline	WAC 296-62-076 <u>or 296-155-173</u>
Thiram	WAC 296-62-07519
Vinyl chloride	WAC 296-62-07329

AMENDATORY SECTION (Amending WSR 03-20-115, filed 10/1/03, effective 1/1/04)

WAC 296-841-20005 Identify and evaluate respiratory hazards.

You must:

✍ Make sure employees are protected from potentially hazardous exposure while you perform your evaluation

✍ Perform your evaluation without considering the protection provided to employees by a respirator

✍ Determine the form of the hazard, such as dust, mist, gas, oxygen deficiency, or biological agent.

✍ Make sure you ((include)) consider:

- Potential emergency and rescue situations that may occur, such as equipment or power failures, uncontrolled chemical reactions, fire, explosion, or human error

- Workplace conditions such as work processes, types of

material, control methods, work practices and environmental conditions.

✍ Determine or reasonably estimate whether any employee is or could be exposed to any of the following:

- Any airborne substance above a permissible exposure limit (PEL) listed in Table 3

- A substance at or above the action level (AL) specified in the rule for that substance

- Any other respiratory hazard.

✍ Use **any** of the following to determine employee exposure:

- Information that would allow an estimate of the level of employee exposure, such as MSDSs or pesticide labels, observations, measurements or calculations

- Data demonstrating that a particular product, material or activity cannot result in employee exposure at or above the ~~((action level ()) AL(())~~ or PEL

- Personal air samples that represent an employee's usual or worst case exposure for the entire shift.

Note: ✍ Rules for specific substances may contain additional requirements for determining employee exposure.

✍ Use methods of sampling and analysis that have been validated by the laboratory performing the analysis.

✍ Samples from a representative group of employees may be used for other employees performing the same work activities when the duration and level of exposure are similar.

You must:

✍ Consider the atmosphere to be immediately dangerous to life or health (IDLH) when you cannot determine or reasonably estimate employee exposure

$$\begin{array}{c} \text{Pencil icon} \\ \hline \end{array} = \frac{C_1}{L_1} + \frac{C_2}{L_2} + \dots + \frac{C_n}{L_n}$$

The symbol	Is the ...
E	Equivalent exposure for the mixture. ((The PEL is exceeded when the value of E is greater than 1.) When the value of E is greater than 1, a respiratory hazard is present.)
C	Concentration of a ((particular contaminant)) substance.
L	((PEL for that contaminant, from Table 3.)) TWA, STEL, or ceiling for that substance, from Table 3.

AMENDATORY SECTION (Amending WSR 03-20-115, filed 10/1/03, effective 1/1/04)

WAC 296-841-20010 Control employee exposures.

You must:

- ✍ Use feasible controls to protect employees from exposure to respiratory hazards by:
 - Reducing employee exposure to a level that removes the respiratory hazard, such as to a level below the permissible exposure limits (PEL) in Table 3;

OR

- Reducing the ((hazard)) exposure to the lowest achievable level, when the respiratory hazard cannot be removed.

IMPORTANT:

Using respirators and other PPE is not a substitute for the feasible controls required by this section.

Note: The following table gives you examples of control methods.

Table 1
Examples of Possible Controls

Control:	For example:
Using a different chemical (substitution)	<ul style="list-style-type: none"> ✍ Choose a chemical with a lower evaporation rate or vapor pressure ✍ Choose a chemical without hazardous ingredients
Changing a process to lessen emissions	<ul style="list-style-type: none"> ✍ Use hand rolling or paint dipping instead of paint spraying ✍ Bolt items instead of welding them

Separating employees from emissions areas and sources	<ul style="list-style-type: none"> ✍ Use control rooms ✍ Build an enclosure around process machinery or other emissions sources ✍ Automate a process
Removing emissions at or near the source (local exhaust ventilation)	<ul style="list-style-type: none"> ✍ Install exhaust hoods or slots to capture emissions ✍ Use an exhausted enclosure (like a blasting cabinet or laboratory hood)
Diluting and removing emissions in the work area (general exhaust ventilation)	<ul style="list-style-type: none"> ✍ Allow natural air movement to create an adequate airflow through an area ✍ Use mechanical fans
Modify work practices	<ul style="list-style-type: none"> ✍ Change the position of the worker relative to the work so fumes, vapors, or smoke do not go into their face
Rotate employees – Some specific rules prohibit the use of this control method	<ul style="list-style-type: none"> ✍ Move employees to another job that is without exposure, on a schedule to keep their total exposure below the <u>((PEL))</u> permissible exposure limit

AMENDATORY SECTION (Amending WSR 03-20-115, filed 10/1/03, effective 1/1/04)

WAC 296-841-20020 Notify employees.

You must:

✍ Notify employees who are or may be exposed to respiratory hazards, as specified in Table 2.

Note: ✍ The notification may be provided either individually, to a group, or by posting of results in an appropriate location that is accessible to affected employees.

Table 2
Notification Requirements

Notify employees of:	As follows:
Any exposure result above <u>((the))</u> <u>a permissible exposure limit (PEL)</u>	Within five business days, after the employee's exposure result is known to the employer

<p>The corrective action being taken to reduce employee exposure to or below the PEL AND The schedule for completion of the corrective action and any reasons why exposures cannot be lowered to below the PEL</p>	<p>Within fifteen business days, after the employee's exposure result is known to the employer</p>
<p>An exposure to these substances:</p> <ul style="list-style-type: none"> ✓ Acrylonitrile ✓ Arsenic (inorganic) ✓ Asbestos ✓ Benzene ✓ Butadiene ✓ Cadmium ✓ Coke oven emissions ✓ Cotton dust ✓ 1,2-Dibromo-3-chloropropane ✓ Ethylene oxide ✓ Formaldehyde ✓ Lead ✓ Methylene chloride ✓ Methylenedianiline ✓ Vinyl chloride 	<p>In writing, as specified in the rule specific to the substance</p>

((Table 3 "Exposure Limits for Air Contaminants"

IMPORTANT:

The following information applies to Table 3, Exposure Limits for Air Contaminants.

✓ Exposure needs to be determined from personal air samples taken in the breathing zone or from monitoring representative of the employee's breathing zone.

✓ Ppm refers to parts of vapor or gas per million parts of air by volume, at 25 degrees C and 760 mm Hg pressure.

✓ Mg/m³ refers to milligrams of substance per cubic meter of air.

~~For a metal that is measured as the metal itself, only the CAS number for the metal is given. The CAS numbers for individual compounds of the metal are not provided. For more information about CAS registry numbers see the website: <http://www.cas.org>.~~

~~Time weighted averages (TWA₈) represent the maximum allowed average exposure for any 8-hour time period. For work periods longer than 8 hours the TWA₈ needs to be determined using the 8 continuous hours with the highest average concentration.~~

~~Short term exposure limits (STEL) represent maximum allowed average exposure for any fifteen-minute period, unless another time period is noted in Table 3.~~

~~The ceiling represents the maximum allowed exposure for the shortest time period that can feasibly be measured.~~

~~An "X" in the "skin" column indicates the substance can be absorbed through the skin, either by airborne or direct contact.~~

~~Additional requirements for the use of gloves, coveralls, goggles, and other personal protective equipment can be found in WAC 296-800-160.~~

~~The respirable fraction of particulate is measured by sampling with a size selector having the following characteristics:~~

Mean aerodynamic diameter in micrometers	Percent passing the selector

Zirconium compounds (as Zr)	7440-67-2	5 mg/m ³	10 mg/m ³	—	—))

NEW SECTION

WAC 296-841-20025 Permissible exposure limits of air contaminants.

IMPORTANT:

The following information applies to Table 3, Permissible Exposure Limits for Air Contaminants.

↗ Exposure needs to be determined from personal air samples taken in the breathing zone OR from monitoring representative of the employee's breathing zone.

↗ Ppm refers to parts of vapor or gas per million parts of air by volume, at 25 degrees C and 760 mm Hg pressure.

↗ Mg/m³ refers to milligrams of substance per cubic meter

of air.

For a metal that is measured as the metal itself, only the CAS number for the metal is given. The CAS numbers for individual compounds of the metal are not provided. For more information about CAS registry numbers see the website: <http://www.cas.org>.

Time weighted averages (TWA_8) represent the maximum allowed average exposure for any 8-hour time period. For work periods longer than 8-hours the TWA_8 needs to be determined using the 8 continuous hours with the highest average concentration.

Short-term exposure limits (STEL) represent maximum allowed average exposure for any fifteen-minute period, unless another time period is noted in Table 3.

The ceiling represents the maximum allowed exposure for the shortest time period that can feasibly be measured.

An "X" in the "skin" column indicates the substance can be absorbed through the skin, either by airborne or direct contact.

Requirements for the use of gloves, coveralls, goggles, and other personal protective equipment can be found in WAC 296-800-160.

The respirable fraction of particulate is measured by sampling with a size-selector having the following characteristics:

Mean aerodynamic diameter in micrometers	Percent passing the selector
1	97
2	91
3	74
4	50
5	30
6	17
7	9
8	5
10	1

Table 3 "Permissible Exposure Limits for Air Contaminants"

Substance	CAS	TWA_8	STEL	Ceiling	Skin

Respirable fraction	---	5 mg/m ³	10 mg/m ³	---	---
Zirconium compounds (as Zr)	7440-67-2	5 mg/m ³	10 mg/m ³	---	---

AMENDATORY SECTION (Amending WSR 03-20-115, filed 10/1/03, effective 1/1/04)

WAC 296-841-300 Definitions.

Breathing zone

The space around and in front of an employee's nose and mouth, forming a hemisphere with a six to nine inch radius.

Ceiling

An exposure limit, measured over the shortest time period feasible, that must not be exceeded during any part of the employee's workday.

Dust

Solid particles suspended in air. Dusts are generated by handling, drilling, crushing, grinding, rapid impact, detonation, or decrepitation of organic or inorganic materials such as rock, ore, metal, coal, wood, grain, etc.

Exposed or exposure

The contact an employee has with a toxic substance, harmful physical agent or oxygen deficient condition, whether or not protection is provided by respirators or other personal protective equipment (PPE). Exposure can occur through various routes of entry, such as inhalation, ingestion, skin contact, or skin absorption.

Fume

Solid particles suspended in air, generated by condensation from the gaseous state, generally after volatilization from molten metals, etc.

Gas

A normally formless fluid which can be changed to the liquid or solid state by the effect of increased pressure or decreased temperature or both.

Mist

Liquid droplets suspended in air, generated by condensation from the gaseous to the liquid state or by breaking up a liquid into a dispersed state, such as by splashing, foaming, spraying or atomizing.

Oxygen deficient

An atmosphere with an oxygen content below 19.5% by volume.

Permissible exposure limits (PEL)

Permissible exposure limits (PELs) are employee exposures to toxic substances or harmful agents that must not be exceeded. PELs are specified in applicable WISHA rules.

Short-term exposure limit (STEL)

An exposure limit averaged over a short time period

(usually measured for fifteen minutes) that must not be exceeded during any part of an employee's workday.

Time weighted average (TWA₈)

An exposure limit averaged over eight hours that must not be exceeded during an employee's workday.

Toxic substance

Any chemical substance or biological agent, such as bacteria, virus, and fungus, which is any of the following:

- ✓ Listed in the latest edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS)
- ✓ Shows positive evidence of an acute or chronic health hazard in testing conducted by, or known to, the employer.
- ✓ The subject of a material safety data sheet kept by or known to the employer showing the material may pose a hazard to human health.

Vapor

The gaseous form of a substance that is normally in the solid or liquid state.
